                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to a method for diagnosing a disorder characterised by expression of a human cancer associated antigen precursor coded for by a nucleic acid molecule (NAM). The method comprises: (a) contacting a biological sample isolated from a subject with an agent that specifically binds to the NAM, an expression product or a fragment of an expression product complexed with an HLA molecule; and (b) determining the interaction between the agent and the NAM or the expression product as a determination of the disorder. The products and methods can be used in the diagnosis, monitoring, research, or treatment of conditions characterised by the expression of various cancer associated antigens. The invention provides nucleic acid sequences and encoded polypeptides which are cancer associated antigen precursors expressed in human breast cancer, renal cancer, colon cancer, gastric cancer, prostate cancer and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Example
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New isolated cancer associated nucleic acids and polypeptides isolated using sera from cancer patients, used to develop profor the diagnosis, monitoring or treatment of cancers

                                                                                                                                                                                                                    The nucleotide sequence (NS) of the full-length protein-coding sequence of clones c125_4 (AAV83132), da228_6 (AAV83133), du410_5 (AAV83134), eh80_1 (AAV83135), er369_1 (AAV83136), fh123_5 (AAV83137), fm60_1 (AAV83138) or fr473_2 (AAV83139), (all clones are deposited as ATCC 98415) and the proteins they encode are predicted to have biological activities which would make them suitable for treating, preventing or ameliorating medical conditions in humans and animals for example, tumour suppression/invasion activity, immune system boosting activity. The polynucleotides are also believed to be useful for gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                           Agostino

CC full-length cDNAs defined in the specification. Where a primer set CC full-length cDNAs defined in the specification. Where a primer set CC comprises: (a) an oligo-dT primer and an oligonucleotide complementary cto the complementary strand of a polynucleotide which comprises one of CC the 5602 nucleotide sequences defined in the specification, where the CC oligonucleotide comprises at least 15 nucleotides; or (b) a combination of an oligonucleotide comprising a sequence complementary to the CC complementary strand of a polynucleotide which comprises a 5'-end CC sequence and an oligonucleotide comprising a sequence, where the CC oligonucleotide which comprises a 3'-end sequence, where the CC oligonucleotide comprises and the combination of the specification. The primers are useful for synthesising polynucleotides, CC of the specification of the primers are useful for synthesising polynucleotides, CC detection and/or diagnosis of the abnormality of the proteins encoded by CC the full-length cDNAs. The primers are also useful for the comprise and cCC AAB3593 represent human cDNAs equences; AAH3368 and CC AAB3593 to AAH13674 represent human cDNA sequences; and AAH13629 to AAH13632 represent oligonucleotides, all of which are used in the exemplification of the present invention.

                                                                                                                                                                                                                                                                                                                                  Ö
```

The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAAI88642-AAI42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide in gene therapy is a composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous

The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system diseases, such as Alaheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, Activin/inhibin activity, chemotactic/chemokinetic activity, heemostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening, and therapy is a contained and thrombolytic activity, cancer diagnosis and therapy, drug screening, and therapy is a contained and thrombolytic activity, cancer diagnosis and therapy.

They can be used as a model for studying congestive heart failure (CHF) or hypertrophic cardiomyopathy. Such animals are used to study molecular and cellular events associated with CHF; to identify compounds for treating CHF, and in evaluating effects of diet and exercise on CHF. Conditions associated with CHF that can be evaluated this way are dilated or hypertrophic cardiomyopathy; acute aortic regurgitation; tricuspid stenosis; constrictive pericarditis; acute infective endocarditis; ischaemic heart disease; hypertension; primary myocardial disease; valvular or pericardial disease; hyperthyroidism; anaemia; arteriovenous fistula; beri-beri and Paget's disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Actin binding domain; alpha myosin heavy chain; bridging; mouse; transgenic mammal; congestive heart failure; study; treatment; diet. exercise; effects; identification; hypertrophic cardio-myopathy, dilated or hypertrophic cardiomyopathy; acute aortic regurgitation; tricuspid stenosis; constrictive pericarditis; hypertension; acute infective endocarditis; ischaemic heart disease; primary myocardial disease; valvular disease; pericardial disease; hyperthyroidism; anaemia; arteriovenous fistula; beri-beri; hyperthyroidism; anaemia; arteriovenous fistula; beri-beri;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Key
